

## Enhance New Approaches in BioBased Local Innovation Networks for Growth

### PRESS RELEASE

ENABLING is a research project funded by Horizon2020, EU's Research and Innovation Programme, aiming to support the spreading of best practices and innovation in the provision (production, pre-processing) of biomass for the BBI (Bio-Based Industry). The project with duration of 36 months (01/12/2017 – 30/11/2020) and a total budget of €1.997.640 brings together leading European research/academic institutions, biomass analysis laboratories, non-profit organizations, farming and bioeconomy industrial associations and support entities to the farming or bio-based businesses.

ENABLING is based on the consortium's vision that the biomass to BBPs value chains can enhance economic growth, a sound management of natural resources and positively contribute to job-creation in the regions and countries where they can be deployed.

The consortium, consisting of [16 partner organizations](#) from 13 different countries, is well balanced in terms of comprehensive knowledge on the biomass sector, strong expertise in R&I, strategic role in knowledge transfer and consolidate experience in the implementation of European projects and international cooperation.

#### Project Details

**Project ID:** 774578

**Start Date:** 01/12/2017

**Project Duration:** 36 months

More information on ENABLING can be found on the [Enabling Project website](#) and Enabling social media ([LinkedIn](#), [Twitter](#)).

For additional information please contact the Project Coordinator at Federunacoma or the Dissemination Coordinator at Core Innovation:
